

Elastic Strip VT-Strip

Vibratec VT-Strip is a self-adhesive soft elastic strip primarily used to separate vibration isolated structures from non-isolated structures, so no acoustic bridging can occur.

Product Characteristics

VT-Strip consists of re-cycled mixed cell polyurethane foam.

Thickness: 10 mm

Length: 1150 mm

Width: 45 mm or project specific

Product Applications

VT-Strip can be attached on the surrounding walls before installing a vibration isolated floating floor or inner ceiling.

This speeds up and helps the installation of floor/ceiling boards and ensures no structural contact (meaning no acoustic bridging).

In floating floors, the VT-Strip can be delivered in widths corresponding to the floor thickness. The VT-Strip can be hidden with Vibratec's acoustic sealant VT-FAS.
