

Noise Enclosure

Sound insulating enclosures reduce the transfer of noise between the source and the recipient.

Product Characteristics

We deliver modular standard systems as well as custom made solution based on requirements for sound reduction, fire resistance properties and material. For offshore application the enclosures are made completely in AISI 316 together with all necessary documentation needed.

When assembled we measure the final sound reduction on the ready made enclosure, thus ensuring that the enclosure lives up to our promised values.

Vibratec offer two basis designs that can be customized according to client requirements.

Modular:

A standard modular noise enclosure in aluminum, galvanized or AISI 316 steel. Easy to assemble with bolts, joints and corner profiles. Panel thickness is standard of 25 mm, but can be manufactured in 50 mm thickness or even higher.
